

## LORCANO/QUALICUM

### **MARBLE**

Our beautiful marble is quarried on Northern Vancouver Island. It has been polished to show off its natural grain and pattern and left unsealed to age naturally.

Although marble is a dense and heavy stone and it can stain if not treated with care. Acidic liquids, such as red wine, can damage the finish, so we ask that you wipe off any spills immediately with a damp cloth. Or, if you miss the moment, chalk it up to a great party!

### **BRASS, PATINA BRONZE & POLISHED STEEL BASE**

Our bases have been finished with a wax coating and will continue to evolve as they sit in their new environment. To clean, simply use a dry rag and lightly dust the finish.

## QUAKE SERIES

### **MARBLE**

Our beautiful marble is quarried on Northern Vancouver Island. It has been polished to show off its natural grain and pattern and left unsealed to age naturally.

Although marble is a dense and heavy stone and it can stain if not treated with care. Acidic liquids, such as red wine, can damage the finish, so we ask that you wipe off any spills immediately with a damp cloth. Or, if you miss the moment, chalk it up to a great party!

### **DOUGLAS FIR**

Our Douglas fir top is clear coated with stain. Wood will evolve and darken based on its exposure to natural light. We love the idea that your table will adapt to its new environment. To clean, use a damp cloth lightly over the surface.

### **MDF WITH PAINT**

Our paint finish requires a quick damp cloth to keep it fresh. We recommend using coasters if setting a hot cup of tea or coffee or any other item that might have moisture or intense heat.

### **ALUMINUM BASE**

Our powder coat finish allows for easy cleaning. Use a damp cloth or a duster.
